## Right Angle Trig

Analysis
Name $\qquad$ (4.2)

Date $\qquad$
RIGHT TRIANGLE

Greek letters such as: $\qquad$ alpha; $\beta$, $\qquad$ ; $\qquad$ , theta; $\qquad$ gamma are used to represent angles.

The Pythagorean Theorem is used to show the relationship between the sides of a right triangle.
$\qquad$ where $a$ and $b$ are the legs and $c$ is the hypotenuse of the triangle.

The 6 Trigonometric Functions are ratios of the sides of a right triangle with respect to an angle of triangle. These functions are: sine, cosine, tangent, cosecant, secant, cotangent.

LABEL the sides of the right triangle with respect to $\theta$. Then write the ratios of the 6 trig functions with respect to $\theta$.

| $\sin \theta=$ | $\csc \theta=$ |
| :--- | :--- |
| $\cos \theta=$ | $\sec \theta=$ |
| $\tan \theta=$ | $\cot \theta=$ |

Ex 1: Find the length of the missing side of the triangle. Then find the values of the 6 trig functions of $\theta$.
6

$\sin \theta=$
$\cos \theta=$
$\tan \theta=$
$\csc \theta=$
$\sec \theta=$
$\cot \theta=$

Ex 2: Refer to the right triangle diagram below and the given information to solve the right triangle.
Round answers to 3 decimal places.
2. $\alpha=65^{\circ}$ and $c=37 \mathrm{ft}$

*Label the sides of the special triangles below. Then fill the table of trig ratios based on the triangles.

|  | $30^{0}$ <br> $(\pi / 6)$ | $60^{0}$ <br> $(\pi / 3)$ | $45^{0}$ <br> $(\pi / 4)$ |
| :--- | :--- | :--- | :--- |
| $\sin \theta$ |  |  |  |
| $\cos \theta$ |  |  |  |
| $\tan \theta$ |  |  |  |
| $\csc \theta$ |  |  |  |
| $\sec \theta$ |  |  |  |
| $\cot \theta$ |  |  |  |

*Use the coordinates of the Unit Circle to fill in the table of trig ratios for the quadrantal angles.

|  | $0^{\circ}$ <br> $(0)$ | $90^{0}$ <br> $(\pi / 2)$ | $180^{0}$ <br> $(\pi)$ | $270^{0}$ <br> $(3 \pi / 2)$ | $360^{0}$ <br> $(2 \pi)$ |
| :--- | :---: | :---: | :---: | :---: | :---: |
| $\sin \theta$ |  |  |  |  |  |
| $\cos \theta$ |  |  |  |  |  |
| $\tan \theta$ |  |  |  |  |  |
| $\csc \theta$ |  |  |  |  |  |
| $\sec \theta$ |  |  |  |  |  |
| $\cot \theta$ |  |  |  |  |  |
